MEMORANDUM TO FILE

Sir:

The undersigned wishes to assure that the prosecution file correctly reflects all facts surrounding the examination of the present application. It is noted that the Examiner's interview summary dated June 8, 2005 accurately indicates that U.S. Patent Application Publication number US2002/0048224A1 to Dyson was fully considered by the Examiner during prosecution of this application. However, upon review of PAIR, it is unclear that consideration of this reference will find its way to the face of the patent.

Applicants therefore request that the Examiner assure that this patent publication be listed on the face of the issued patent.

Applicant also wishes to make the record clear that no art has been cited that teaches or suggests creating a medium identifier from at least two of: a number of tracks on the medium, a distance, and a track fingerprint. Applicant also wishes to make of record that no art has been cited that teaches or suggests any sort of commercial/non-commercial test of any sort. Accordingly, for at least those reasons, Applicant is entitled to broader protection than that reflected in the currently allowed claims, and reserves the option of pursuing such protection in continuing applications.

Respectfully submitted,

Jerry A. Miller
